

Overview

Aztec Network is the first private ZK-rollup on Ethereum, enabling decentralized applications to access privacy and scale. Aztec's rollup is secured by its industry-standard PLONK proving mechanism used by the leading zero-knowledge scaling projects.

PRODUCTS

zk money

Our first product is [zk.money](#), a private transfer and Defi aggregation protocol built on Aztec. Since launch, [zk.money](#) has had over 75,000 registered users, 250,000 transactions, and \$50 million in total deposits, all while being 96% cheaper than existing private transfer protocols.

Founded

2017

Team

The team is comprised of 30 leading zero-knowledge cryptographers and engineers.

Founders

Zac Williamson & Joe Andrews

Funding

The company has raised a total of \$19m of funding, including a \$17m Series A led by Paradigm in 2021.

ANNOUNCEMENTS

Aztec Connect

We are now excited to announce the mainnet launch of Aztec Connect, a set of developer tools enabling private transactions on Ethereum for the first time ever. Aztec Connect allows users to confidentially access world-class services on Ethereum with up to 100× cost savings, all while strengthening Aztec's existing privacy guarantees. Aztec Connect expands zk.money's functionality beyond payments and into DeFi, DAOs, and NFTs.
